SUMMARY

Results-driven .NET Backend Developer and Systems Analyst specializing in architecting scalable RESTful APIs using C#, .NET 8-10, and ASP.NET Core. Proven ability to translate complex business requirements into robust SQL Server database schemas and high-performance systems using Clean Architecture, EF Core, Redis, and RabbitMQ. Proficient in application security (JWT, RBAC) and Docker containerization. Fully available for junior backend roles, committed to delivering clean and maintainable code.

TECHNICAL SKILLS

- **Backend & DB:** C#, .NET 8-10, ASP.NET Core (Web API/MVC), EF Core, SQL Server, Supabase.
- **Architecture:** Clean Architecture, SOLID, Repository Pattern, Redis, RabbitMQ, System Analysis.
- **Security:** JWT, ASP.NET Identity, RBAC, Data Protection, Cybersecurity Best Practices.
- **DevOps & Tools:** Docker, CI/CD (GitHub Actions), Git, Swagger, MonsterASP Hosting.

PROJECTS & EXPERIENCE

Shamelco (Advanced Booking & Financial Management System)

Role: Backend Developer & Systems Analyst | May 2026 – Present

- Engineered a multi-tenant booking and financial platform supporting 3 user roles (Client, Owner, Employee) with zero double-booking tolerance.
- Architected a scalable .NET 10 & SQL Server backend applying Clean Architecture and CQRS across 15+ database entities and 30+ REST endpoints.
- Implemented EF Core Concurrency Tokens to eliminate 100% of booking race conditions, and integrated Paymob gateway for secure real-time payments.
- Automated reservation reminders and dynamic financial reporting using Hangfire background services, slashing manual processing overhead by ~70%.

EcoBridge Platform (IEEE Cross-Regional Management System)

Role: Backend Developer & Git Workflow Coordinator | Jan 2026 – Apr 2026

- Engineered a centralized backend API unifying management and data workflows across 2 international student branches (Egypt, Tunisia).
- Designed normalized SQL Server schemas and secured 20+ administrative endpoints using ASP.NET Identity and JWT Role-Based Access Control (RBAC).
- Standardized Git workflows and reviewed Pull Requests across a 6-member distributed engineering team, reducing merge conflicts by ~35%.
- Delivered a scalable API managing 500+ records with 100% data isolation and zero-downtime deployments.

IEEE Beni-Suef Official Portal (Automated Communication Engine)

Role: Backend Developer | Jan 2026 – Mar 2026

- Engineered a reliable communication engine to automate member onboarding and event notifications for high-traffic recruitment drives.
- Developed a scalable ASP.NET Core REST API integrated with Brevo cloud email service for asynchronous background email delivery.
- Documented 100% of endpoints via Swagger/OpenAPI, enabling rapid, error-free integration for the Frontend React team.
- Automated workflows for 400+ members with a 99.8% email delivery rate, cutting manual notification overhead by ~80%.

EDUCATION

- Faculty of Navigation Science and Space Technology
- Bachelor of Science (B.Sc.) Third-Year Student.

Expected 2028

Extracurricular Activities

- Represented the Back-End committee at the Egypt Career Summit.
- Awarded "Best Member" for two months (March & April) in recognition of outstanding performance and dedication.
