SUMMARY

Results-driven Full-Stack (.NET & React) Developer and Systems Analyst specializing in architecting scalable backend APIs with C# / ASP.NET Core and crafting dynamic, responsive frontends using React.js, TypeScript, and Next.js. Proven ability to bridge complex business requirements into high-performance web applications using Clean Architecture, SQL Server, Entity Framework Core, and modern state management. Skilled in optimizing response times via Redis caching and RabbitMQ messaging, with a strong focus on secure API integration and UI/UX best practices. Fully available and dedicated for junior full-stack roles or remote opportunities with flexible scheduling.

TECHNICAL SKILLS

- **Frontend:** Next.js (App Router), React.js, TypeScript, JavaScript (ES6+), Tailwind CSS, Redux.
- **Backend:** C#, .NET 8/9/10 ASP.NET Core (Web API & MVC), Entity Framework Core, SQL Server.
- **Architecture:** Clean Architecture, Repository Pattern, Unit of Work, SOLID Principles, RESTful APIs.
- **Tools & Performance:** Redis Caching, RabbitMQ, JWT Auth, Git/GitHub, Postman, Swagger.

PROJECTS & EXPERIENCE

Shamelco (End-to-End Booking & Financial Management Platform)

Role: Full-Stack Developer & Systems Analyst | May 2026 – Present

- Engineered an end-to-end multi-tenant venue booking platform supporting 3 distinct user roles (Client, Business Owner, Employee) with zero double-booking tolerance.
- Architected a responsive, dynamic SPA using React, TypeScript, and Tailwind CSS, implementing interactive booking calendars and localization (i18n) for a seamless user experience.
- Built a scalable .NET 10 & SQL Server backend applying Clean Architecture and CQRS across 15+ database entities, seamlessly integrating the Paymob payment gateway with frontend checkout components.
- Eliminated 100% of concurrent booking conflicts using EF Core concurrency tokens and automated billing reports via Hangfire background services, slashing manual processing overhead by ~70%.

EcoBridge Platform (IEEE Cross-Regional Management System)

Role: BackEnd Developer & Git Coordinator | Jan 2026 – Apr 2026

- Co-engineered a centralized web platform to unify administrative workflows and data across 2 international student branches (Egypt, Tunisia).
- Designed normalized SQL Server schemas and implemented ASP.NET Identity with JWT Role-Based Access Control (RBAC) to secure 20+ administrative endpoints, integrating them with responsive frontend dashboard views.
- Standardized Git version control workflows and reviewed Pull Requests across a 6-member distributed engineering team, reducing merge conflicts by ~35%.
- Delivered a highly maintainable, full-stack platform managing 500+ records with zero-downtime deployments and 100% multi-regional data isolation.

IEEE Beni-Suef Official Portal (Automated Communication Engine)

Role: Backend & API Integration Developer | Jan 2026 – Mar 2026

- Built a reliable communication service to automate member onboarding and event notifications for high-traffic branch recruitment drives.
- Developed a scalable ASP.NET Core RESTful API integrated with Brevo cloud email service for asynchronous background email delivery.
- Documented 100% of endpoints via Swagger/OpenAPI and standardized JSON response structures, enabling rapid, type-safe integration for the Frontend React team.
- Automated communication workflows for 400+ active members with a 99.8% delivery success rate, slashing manual administrative overhead by ~80%.

EDUCATION

Faculty of Navigation Science and Space Technology
Bachelor of Science (B.Sc.) Third-Year Student.

Expected 2028

Extracurricular Activities

Represented the Back-End committee at the Egypt Career Summit.
Awarded "Best Member" for two months (March & April) in recognition of outstanding performance and dedication.
